

# Your trusted partner in antibody discovery and protein production

Recombinant antibodies are revolutionizing the diagnostic market and making immunodiagnostics more sensitive and more accurate. Together with the increasing prevalence of cardiovascular, infectious and metabolic diseases, it has increased the IVD market from 65 billion dollars in 2019 to 127 billion dollars in 2021, the need for quality reagents to use in new developments has skyrocketed.

Icosagen offers smart recombinant antibodies and antigens for diagnostic companies. With more than 20 years of experience in developing and manufacturing antibodies for pharma, the company has acquired excessive know-how about manufacturing quality antigens and developing high-sensitivity and high-affinity antibodies against diagnostically relevant epitopes. Furthermore, out of top 10 IVD companies, we are constantly working together with 7 of them to support their new assay developments. Icosagen is ISO 9001:2015 certified and follows GLP guidelines.

*We are research-driven, with a mission to provide the best diagnostic reagents with fast response times and good technical support.*

## Smart recombinant antibodies in our catalogue are developed thanks to our patented technologies that include:

- Discovery of antibodies using robust HybriFree platform with direct B-cell cloning, making it possible to use patients' PBMCs for antibody discovery
- CHO cell-based stable cell pools for scalable production of proteins in strictly controlled conditions with consistent quality
- Recombinant production of antigens in human cells including membrane proteins as virus-like particles (VLPs), that can be later used for antibody discovery

## Looking for:

- Diagnostic companies developing and manufacturing immunoassays
- Distributors for diagnostic antibodies and antigens
