X-Road

X-Road interoperability platform is a platform-independent technology that provides all necessary components for the integration of government organisations using e-services. X-Road core provides all necessary security features, including user authentication and authorization, secure communication channels, traceability and auditability.

A Court Information System (CIS) that helps digitalize court processes, organize and manage collaboration activities executed by the court and other related parties in order to make court procedures: transparent, faster, more efficient. CIS is a one-stop shop that covers all services expected in a court house environment.

Court Information System

Budget Management System (BMS)

The main responsibility of **Budget Management (e-Treasury) information system** is to administer and monitor government and public sector budget spending or any budget-based organisation spending. This setup guarantees a central point of control, reporting and compliance of the whole public-sector spending, and reduced costs of bank transactions.

The Enterprise Data Collection solution is used to collect economic, financial and other statistical data from private companies and other organisations. Data is collected electronically, validated and processed automatically using pre-defined rules, then aggregated and transformed for further analysis or forwarded to external parties (other ministries, central bank or other).

Enterprise Data Collection

Core Banking System

Mind-XQ core banking system is built for startup and mid-size banks, credit unions, microfinancing companies and other similar financial institutions, particularly those with strong online presence. The system runs on modular basis to support individual lines of business, e.g. payments, deposits, microfinancing etc.

Securities and Portfolio Management System covers the full lifecycle of portfolio management and its' goal is to manage security portfolios and perform portfolio market value calculation. It is used by fund management companies and organisations, in particular by organisations managing pension funds.

Securities and Portfolio Management
