

Designed for Nordic climate

A steel roof is the best choice for a northern climate, because it can best withstand rapid changes in weather and temperature. While porous stone and eternit can crack, steel does not.

Maintenance free

Integrated solar roofs are maintenance-free because they replace traditional roof covering, eliminating the need for maintenance like removing snow, ice or tree leaves that tend to accumulate under conventional solar panels.

What's more, since integrated solar roofs don't have bolts, they don't require regular fastener inspections.

100% weatherproof

Our solar roofs are sturdy enough to withstand extreme weather conditions - from snow, ice and hail to wind and storms. All Roofit.Solar roofs are 100% waterproof thanks to metal roof fastening techniques that have been in use for centuries.

Invisible solar roof

Our award-winning 2-in-1 integrated solar roofs combine traditional Nordic metal roof design with state-of-the-art solar technology.

Our fully integrated solar roof panels create a tight and weatherproof roofing solution that generates sustainable, 100% green energy.

Products

Velario®

Our Velario® module, installed using the double seam technique, delivers an impressive power output of 155 W/m². It's perfect for complex roofs with multiple chimneys, skylights, or dormers.

What's more, it's accepted by authorities for use on protected and heritage buildings.

Click

Click modules enable fast installation on larger roofs, making it an ideal choice for those looking to quickly switch to solar power. With a power output of 160 W/m², this affordable solution is designed to maximize the benefits of every square meter.

NuClick®

The perfect solar solution for smaller roofs and homeowners who value elegant design. Our narrow NuClick modules are ideal for maximizing electricity production in limited space, with an impressive power output of 170 W/m².

Roof of the future

Renewable energy shouldn't come at the cost of aesthetics. Our 2-in-1 solar roof gives your home an aesthetically beautiful look and blends in perfectly with the surroundings. From a distance, solar panels are invisible to the eye.

The strength of steel and the power of the sun

Steel is an extremely strong and durable material that has been used on roofs for centuries. Steel roof is long-lasting and can withstand different weather conditions well. Our steel solar roofs can last for decades.

360° protection

Our integrated solar roofs offer more than just protection from rising electricity prices. With all electrical wires and connectors safely secured under the steel roof, our solution ensures increased durability and significantly lowers the risk of short circuits due to weather damage.
