

## Our software powers your products

Scale your product reach

Innovate with balanced product cost

Reduce product maintenance costs

## Services

### Embedded software and systems

We build embedded platforms, apps, firmware, middleware, device drivers, human-machine interfaces (HMI), and complex embedded software solutions.

[Read more →](#)

### IoT-cloud integration and applications

We provide full-cycle cloud solution development and integrate hardware products to streamline your business processes.

[Read more →](#)

### Customer-centric digital services

We design quality digital services that users appreciate. We develop digital services that are accessible on every platform, such as web and native mobile apps.

## Together we build intelligent, remote-controlled IoT products and digital services that deliver value for years

Experience

30+ years

Offices

5 offices

Portfolio

300+ customers

Export

90%+

20 countries worldwide

People

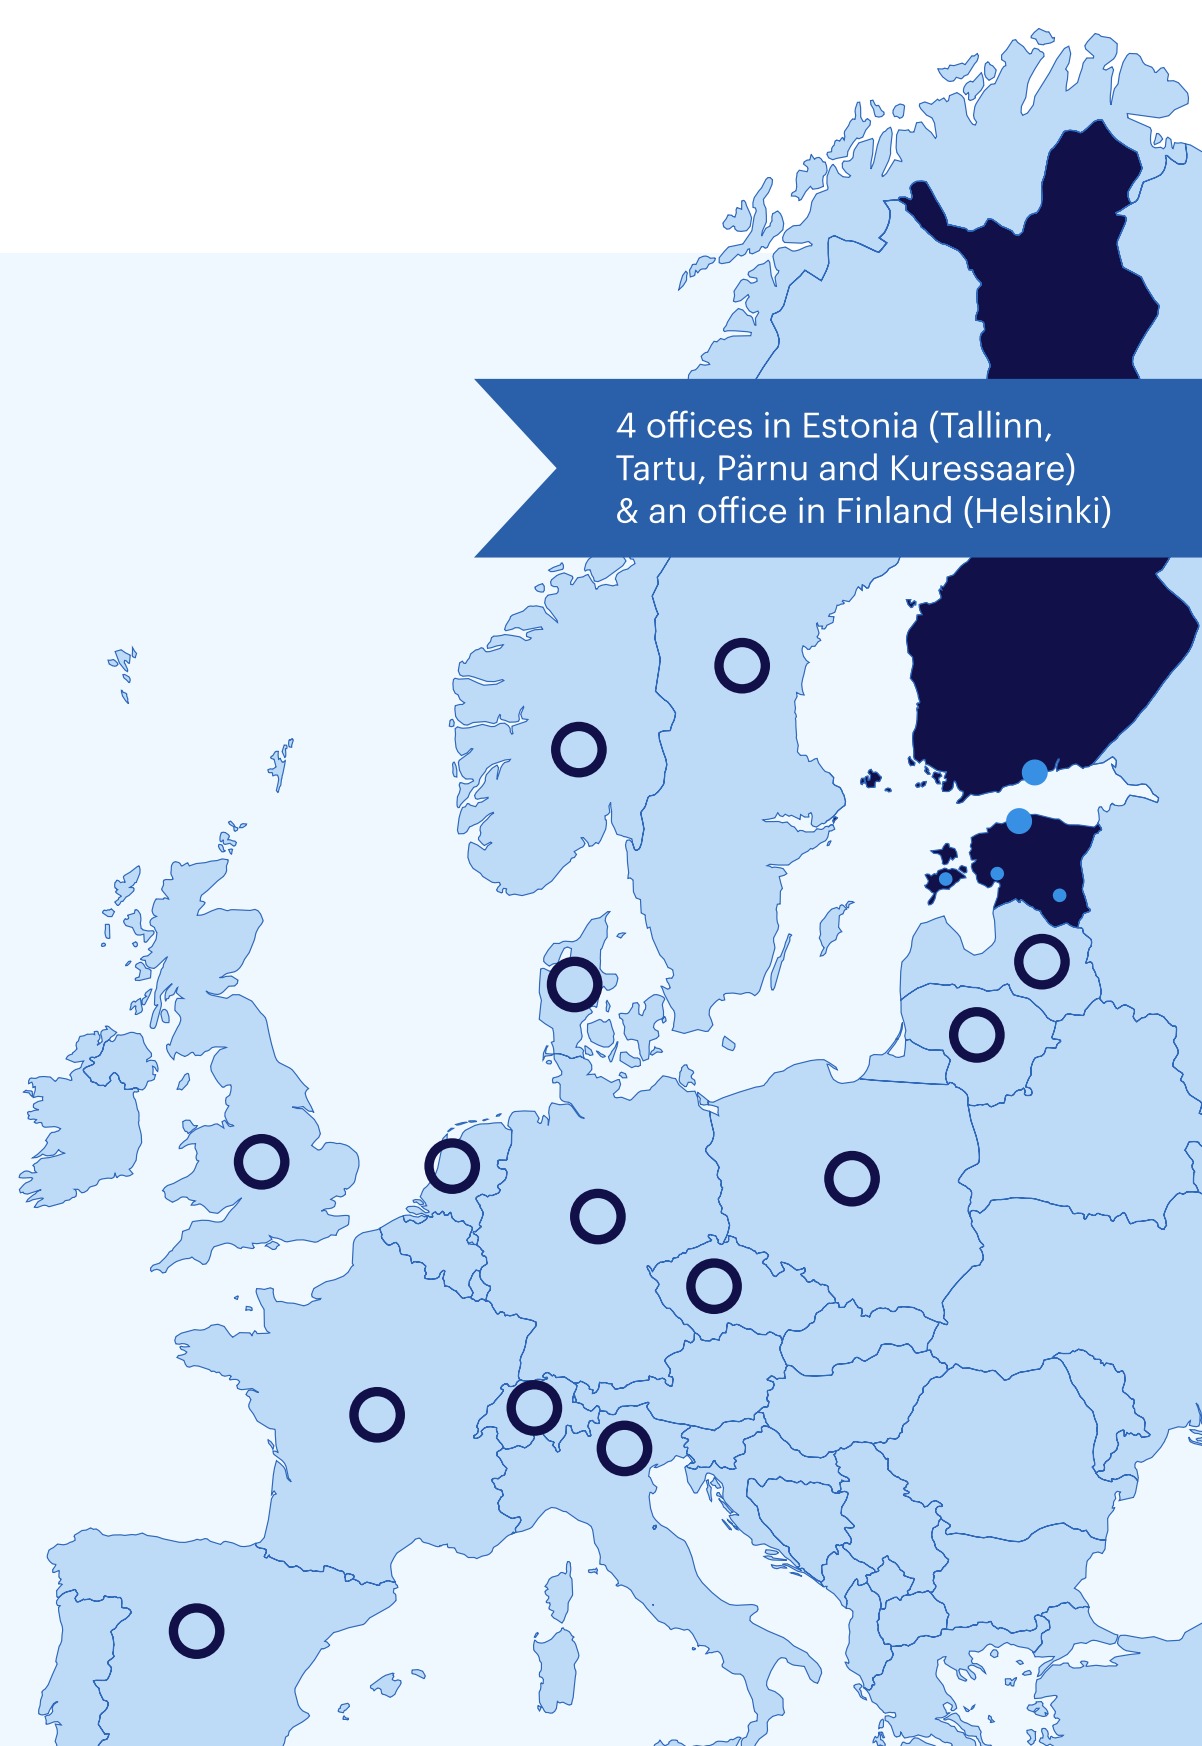

160+ experts

Loyalty

70 NPS

Portfolio

1550+ projects

4 offices in Estonia (Tallinn, Tartu, Pärnu and Kuressaare) & an office in Finland (Helsinki)

## Syncing the tech, data and human agenda

We help device and machine manufacturers develop intelligent products and focus on customers through value-adding digital services. We do this by combining data science and software development expertise with a design thinking approach

## Solutions

### Secure firmware update solution

For 30 years we have helped our clients develop device security and update solutions. In addition of building custom firmware update solutions we are experienced in using over-the-air (OTA) and various industrial communication protocols and mediums.

### Cloud connectivity for your remote devices

We develop cloud connectivity solutions for your devices that are scalable, efficient and enable innovative digital customer services.

[Read more →](#)

### Self-service and internal power user tools

We have long experience developing self-service web and mobile apps for end users as well as for internal power users, catering to a variety of complex business requirements.

[Read more →](#)

### Payment systems solutions

We have developed payment solutions and integrations for banks and big retail store chains.

[Read more →](#)

### Device identity management solution

We have over 20 years of experience securely integrating payment terminals with banking backend services. Today, we use our expertise to implement device security solutions in the industrial device manufacturing world.

[Read more →](#)

### Satellite based house roof detection and measurement solution

Detect and measure house roofs anywhere in the world. Using remote sensing for measuring roofs reduces costs and time significantly compared to the traditional measuring methods.

[Read more →](#)

### IEC 62443 compliance analysis service

We follow IEC 62443 standards during analysis and development. Our engineers are skilled in conducting analysis of development processes and products to identify possible vulnerabilities and cybersecurity risks.
