

DefSecIntel Solutions (DSI) is freedom defenders' partner in surveillance and control, with a mission to create a more secure world. This will be achieved by developing world-class mobile autonomous surveillance systems and C-UAS with AI-assisted technology.

1 Cutting-edge, combat-proven turn-key systems

DSI is developing and manufacturing mobile autonomous surveillance systems and C-UAS with AI-powered C2 mainly for homeland security and defence, offering unique and patented turn-key solutions.

DefSecIntel Solutions' main products are:

- ▶ **Mobile autonomous situational awareness system SurveilSPIRE** – a fully automated patent-pending surveillance platform and remote autonomous monitoring stations, including aerial support recon subsystem and AI-powered C2ISR software;
- ▶ **Vehicle-based rapid intelligence and targeting system with sensors CAIMAN** – a camera/radar and targeting system equipped with a long-range thermal camera module and AI-assisted software for hostile drone detections and other missions;
- ▶ **Mobile all-terrain Ultra-Short-Range Air Defence/C-UAS AI-assisted turn-key system EIRSHIELD** – system equipped with various sensors and soft- and hard-kill effectors against different aerial targets;
- ▶ **Unmanned Surface Vehicle (USV) for various naval operational needs EUROMITE** - a cost-effective and adaptable platform designed to meet a wide range of operational needs. With multi-mission capability, it seamlessly transitions between reconnaissance, logistics, and offensive operations.
- ▶ **Cutting-edge AI-powered C2ISR software** that enables fully autonomous operations with automated video surveillance for area scanning, threat detection, classification, and verification with visual operator situational awareness.

SurveilSPIRE

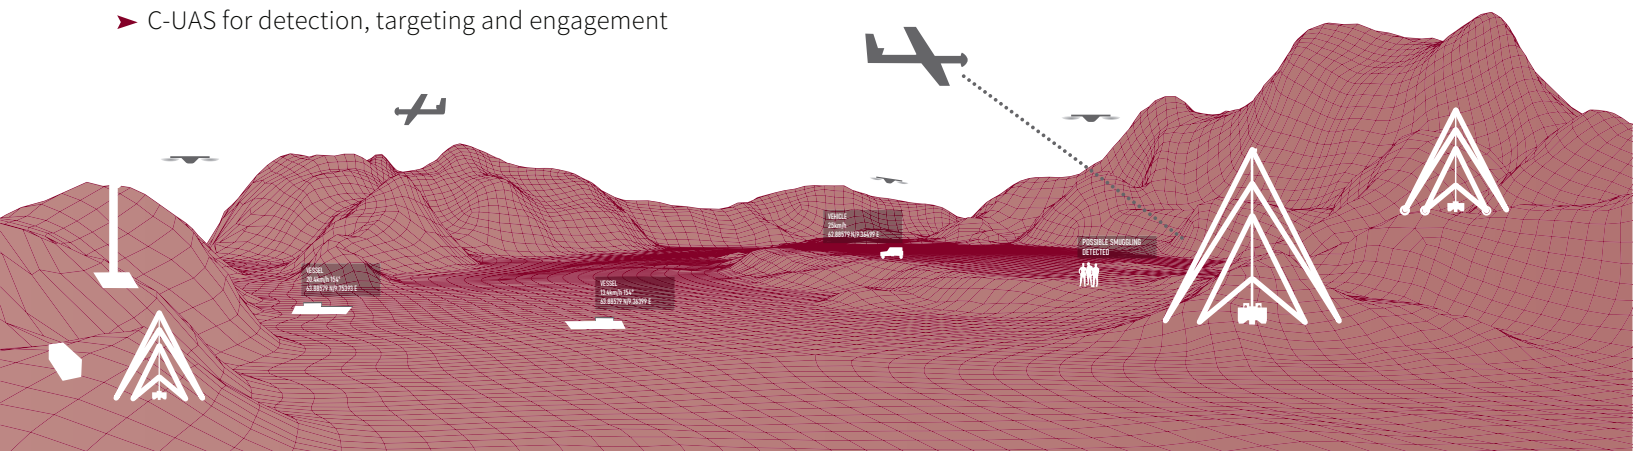

EIRSHIELD

2 Modular and adjustable applications based on different end-users requirements

Our unique solutions are designed for:

- ▶ Land and coastal border monitoring and surveillance;
- ▶ Military peacekeeping missions, force protection and temporary surveillance operations and missions;
- ▶ Critical infrastructure and FOB surveillance;
- ▶ Police and Law enforcement operations;
- ▶ Naval missions;
- ▶ Monitoring and detection of environmental disasters;
- ▶ C-UAS for detection, targeting and engagement

SurveilSPIRE and CAIMAN

3 Value for users

- ▶ Our **combat-proven systems** are designed **for different landscapes, terrains and weather conditions**.
- ▶ Our solutions utilize unique machine learning models and advanced surveillance methods for automated classification and operations, which **ensure cost efficiency for customers** while offering new capabilities.
- ▶ Customers receive a smart surveillance platform, customized with AI-based algorithms, **helping end-users find threats faster while avoiding false alarms and maintaining safety**.
- ▶ DSI smart surveillance platforms can be integrated into different camera and sensor-systems and **adapted for different environments and threats**.
- ▶ DSI provides customers with rapid perimeter surveillance systems for military installations protection, reconnaissance operations, or high-value target search. The use of our automated systems **allows the end users to efficiently cover vast areas while maintaining rapid response time**.
- ▶ Our systems provide flexibility if the operator "in the loop" has to take over the control of automated operation.

CAIMAN

Strong and experienced team

DSI was founded by a team with a long background in security and defence. We have an international dedicated team of more than 100 employees. We possess strong engineering competence with teams specializing in developing hardware, software, AI-models and integrations with external partners. Our headquarters and production are situated in Tallinn, Estonia. We have manufacturing and a maintenance hub in Ukraine and office in Germany.

C2ISR

Excellence in R&D

R&D team members have worked for many years with machine learning algorithms and automation in different universities and programmes. Active participation in international cooperation, including in NATO and European R&D programmes, such as the European Defence Fund (projects PEONEER, AI4DEF, EDOCC, FaRADAI, HSM4COM), space programme. We are awarded with Estonian MoD grants.

Quality

- ▶ DSI is validated by the European Commission. We own security clearance.
- ▶ ISO 9001, ISO 14001, AQAP 2110 certified.
- ▶ We are proud member of the Estonian Defence and Aerospace Industry Association and the Estonian Defence cluster.
- ▶ Awarded in 2023 as "The Best Estonian Defence Company". Awarded TOP1 Innovator in Estonia, TOP3 Exporter and TOP2 most competitive technology company in 2024.
- ▶ Awarded at Estonian Startup Awards 2024 with The Revenue Hack of the Year 2024 and The Hardware of the Year 2024.
