

Brandner Electronics is a small to medium size circuit board production company based in Paide, Estonia. We started out almost 30 years ago as Brandner PCB and have survived through various economic conditions, always striving for excellence and sustainability.

Brandner was acquired by Polymatech in 2025, to continue the same mission.

Keeping the previous workers and expertise, while also hiring young, fresh talent for a bright future of innovation and expansion.

We strive to source our equipment, materials, software and expertise from trusted suppliers, selected to ensure reliability, quality and proximity. This has been the cornerstone of our production since establishment, and shall continue to be so!

Brandner Electronics
